

filtrini kaliy va natriyni xlorli yoki bromli tuzlarining eritmalarini bilan aralashma holdagi qo'rg'oshin tuzlarining eritmalarini kombinatsiyalab ishlatish mumkin.

Eritmada xlor yoki brom ionlari bo'lganda qo'rg'oshin tuzlarining yutish spektri kuchli deformatsiyalanadi. Bu esa shaffoflik sohasini to'lqin uzunliklar shkalasida ma'lum chegaragacha surish imkonini beradi. Afsuski undan yorug'lik filtrlarining integral o'tkazuvchanlik koeffisientlari kichik bo'ladi.

Spektr ultrabinafsha qismini ko'rinvuchi qismidan ajratish uchun temir aralashmalaridan xoli bo'gan nikel sulfat eritmalarini va kobalt sulfat eritmalarini ishlatiladi. Ko'rsatilgan eritmalar aralashmasi spektrning ko'rinnadigan qismni qariyb butunlay yo'qotadigan yaxshi yorug'lik filtrlari olishga imkon beradi.

**1-chizma. Dog'langan va dog'lanmagan paxta yog'ida yorug'lik yutilish koeffisiyentining to'lqin uzunligiga bog'liqligi.**

**2-chizma. Dog'langan va dog'lanmagan kungaboqar yog'ida yorug'lik yutilish koeffisiyentining to'lqin uzunligiga bog'liqligi.**
